Technologies

Comfortable with:

Java, HTML5, CSS/ Bootstrap, JavaScript/jQuery/Node.js/Express.js/JSON, Responsive Layout & Design, UI, Android Development, Debugging applications, Object-Oriented Programming, Test-Driven Development, Git.

Knowledge of:

XML, SQL, NOSQL(MongoDB), React.js, RESTful API, GIMP.

*Willing and able to pick up and learn new languages, interfaces/frameworks & tools.

Involvement

Team Member, Appdroid (Lassonde School of Engineering)

- Report documented and summarized team meetings to senior executives;
- Develop promotional advertisements for upcoming events and workshop, e.g. video and posters;
- Market to and inform 100+ potential attendees of upcoming events and workshops;
- Manage and assist with organizing and running web & mobile application development events and workshops with 20+ attendees.

Projects

Newsletter Subscription App

A web-based mailing list subscription to collect the user's email, first and last name. The front-end is done with **HTML5/CSS3**, and **Bootstrap**, while the back-end is written with **JavaScript/Node.js**.

Fridgeful

3rd place, Ellehacks 2020

Android mobile and Google Assistant application created with **Android Studio**, **Java**, and **Voiceflow**. The app tracks fridge inventory, organizes items based on expiration date, and suggests recipes based on nearest expiration dates, to induce users to reduce food waste.
